

PAVANKUMAR MADDINENI

Senior iOS Engineer | Native iOS Development | Swift | SwiftUI | Enterprise Mobile Applications

Irving, TX | +1 380-232-7599 | pavanmaddineni14@gmail.com |

LinkedIn: [linkedin.com/in/pavan-maddineni-860a3b26b](https://www.linkedin.com/in/pavan-maddineni-860a3b26b)

PROFESSIONAL SUMMARY

Senior iOS Engineer with nearly **10** years of experience designing and delivering scalable native iOS applications across retail, logistics, healthcare, fintech, transportation, and enterprise platforms. Expertise in Swift, SwiftUI, UIKit, Objective-C, MVVM, Clean Architecture, REST APIs, CI/CD pipelines, App Store deployments, and performance optimization. Proven track record of building high-traffic production applications supporting millions of users while improving application stability, scalability, and user experience. Experienced in end-to-end mobile development including architecture design, feature development, testing, release management, and production support within Agile environments.

TECHNICAL SKILLS

Languages: Swift, Objective-C, RxSwift

Frameworks: SwiftUI, UIKit, Combine, CoreBluetooth, CoreLocation, AVFoundation, Media Player, CallKit, Vision, CoreML, Foundation Models (AI), WidgetKit, ActivityKit

Architecture: MVVM, MVC, VIPER, Clean Architecture, SOLID Principles, Dependency Injection, Modular Architecture

Concurrency: Swift Concurrency, Async/Await, Structured Concurrency, Combine, GCD, Multithreading

Networking: REST APIs, GraphQL, URLSession, Alamofire, OAuth, Async/Await, Structured Concurrency

Databases: CoreData, Realm, SwiftData, Keychain, UserDefaults

Testing: XCTest, XCUITest, Appium, UI Testing, Regression Testing

CI/CD & Tools: Jenkins, Fastlane, GitHub Actions, GitLab CI/CD, TestFlight, Xcode, Git, Jira, Confluence, Figma

Analytics & Monitoring: Firebase Analytics, Crashlytics, Mixpanel, New Relic, AWS CloudWatch

Security: SSL Pinning, Runtime Protection, Secure Authentication, Keychain Security

Methodologies: Agile Scrum, SDLC, Sprint Planning, Code Reviews, Release Management, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

7-Eleven | Senior iOS Software Engineer | Irving, TX | June 2023 – Present

- Developing enterprise-scale retail and logistics applications including 7-Eleven, 7Now, Speedway, and Skipcart Delivery Driver platforms supporting millions of active users.
- Designed and implemented scalable native iOS features using Swift, SwiftUI, UIKit, Combine, MVVM, and modular architecture principles.
- Modernized legacy UIKit modules into reusable SwiftUI component systems improving maintainability, scalability, and development efficiency.
- Built reusable internal frameworks and shared UI components to streamline development across multiple enterprise applications.
- Implemented scalable networking layers using URLSession, Async/Await, reactive workflows, caching strategies, and structured error handling.

- Led module-level development activities including technical discussions, code reviews, release coordination, and production support workflows.
- Collaborated with offshore teams, product managers, architects, QA teams, and backend teams in Agile/Scrum environments to deliver scalable production-ready applications.
- Improved application performance, startup time, rendering efficiency, and crash-free sessions through profiling, debugging, and optimization initiatives.
- Improved application stability achieving 99.5% crash-free sessions through monitoring Crashlytics, debugging, and release optimization.
- Integrated Firebase Analytics, Crashlytics, Mixpanel, and New Relic to enhance production monitoring, analytics tracking, and release visibility.
- Implemented accessibility features including VoiceOver support, Dynamic Type, semantic labels, and accessibility identifiers.
- Collaborated with QA automation teams on XCTest, XCUITest, Appium automation support, regression testing, and release validation.
- Improved unit test coverage to 50% for existing code and maintained around 80% coverage for new features.
- Worked extensively on App Store deployments, TestFlight releases, CI/CD pipelines, hotfix deployments, and production support activities.

Key Contributions – Skipcart Delivery Driver Application

- Refactored approximately 60% of legacy UIKit screens into scalable SwiftUI using MVVM and Clean Architecture, reusable components and dependency injection.
- Enhanced real-time delivery tracking and in-app navigation using Google Maps SDK, iOS Driver SDK and background location services.
- Redesigned and enhanced Pickup and Dropoff flows by implementing partner-specific features and improving the overall user experience.
- Integrated Stripe SDK to add secure payout methods, including card and bank accounts.
- Integrated Jumio SDK for driver onboarding and customer ID verification for age-restricted orders.
- Migrated push notification services from Azure Notification Hubs to AWS SNS.
- Reduced polling API frequency by optimizing APIs and implemented temporary caching mechanisms.
- Optimized app memory usage and reduced app size using Apple recommended optimization guidelines, efficient asset handling and SF Symbols.
- Used SwiftGen for localization, asset management and color assets, along with SwiftLint to improve code consistency and maintainability.
- Improved application stability, threading efficiency, and map rendering performance using Instruments, OSLogs and advanced debugging workflows.
- Migrated PromiseKit framework to Swift Concurrency and improved asynchronous handling and code maintainability.

GP Infotech Pvt Ltd | Senior iOS Software Engineer | Hyderabad, India | Jan 2019 – Dec 2021

- Led development of scalable native iOS applications for healthcare, education, conferencing, stock market, and fleet management domains.
- Designed and developed mobile applications using Swift, SwiftUI, UIKit, Combine, MVVM, and Clean Architecture principles.
- Migrated legacy Objective-C applications into modern Swift-based scalable architectures.

- Developed reusable UIKit and XIB based UI components and created separate modules for UI, Core (Networking) and Common Utilities.
- Integrated Zoom SDK, Firebase, Google Maps SDK, MessageKit, and real-time conferencing workflows into enterprise applications.
- Integrated Sinch framework to enable Audio and Video calling between Doctor and Patient applications and implemented Callkit support for background calling functionality.
- Implemented Vision, TensorFlow, and CoreML frameworks for face detection and face match recognition during student authentication.
- Implemented offline support using Realm Database across multiple applications to ensure usability when network connection is unavailable.
- Integrated Firebase push notifications for real-time user communication and updates.
- Used Storyboards and Auto Layout constraints to support iPhone applications across all device sizes and iPad.
- Improved production stability and application performance through memory optimization, crash analysis, and threading improvements.
- Participated in architecture discussions, sprint planning, peer code reviews, App Store releases and TestFlight.
- Collaborated with international stakeholders and clients to gather requirements and deliver scalable enterprise mobile solutions.

Tecordeon Software Pvt Ltd | iOS Software Engineer | Hyderabad, India | May 2017 – Jan 2019

- Developed BLE-integrated native iOS applications using Swift, Objective-C, UIKit, and CoreBluetooth for hardware device communication.
- Built scalable Bluetooth communication layers, asynchronous workflows, and reusable hardware integration modules.
- Designed reusable UI components, custom animations, color controls and gauge meters using Auto Layouts and UIKit for Bluetooth enabled hoverboard control application.
- Improved Bluetooth connectivity stability and reduced communication failures through debugging and protocol optimization.
- Collaborated with hardware engineering teams to improve BLE interoperability and communication performance.
- Participated in production debugging, release testing, App Store deployments, and feature enhancements.

Brucode Technologies Pvt Ltd | iOS Developer | Punjab, India | Mar 2016 – May 2017

- Developed and maintained native iOS applications using Swift, Objective-C, UIKit, and RESTful API integrations.
- Integrated third-party SDKs including Facebook, Google, Microsoft, and Twitter authentication frameworks.
- Built reusable UITableView and UICollectionView components, chart modules, and custom UI workflows.
- Participated in full SDLC activities including development, debugging, testing, deployment, and production support.
- Collaborated with backend and QA teams to improve application stability and release quality.

EDUCATION

Master of Science in Computer Science

Oklahoma Christian University – Edmond, Oklahoma, USA (2022 – 2023)

BTech, Electronics and Communication Engineering – India

Jawaharlal Nehru Technological University Kakinada (June 2010 – June 2014)
