Irving, TX | 3802327599 | pavanmaddineni14@gmail.com

SUMMARY

Senior iOS Software Engineer with 9+ years of experience building scalable, high-traffic mobile applications used by millions. Expert in Swift, SwiftUI, and modern iOS architectures (MVVM, Clean Architecture), with proven ability to lead features end-to-end, mentor teams, and improve app stability, performance, and CI/CD pipelines. Skilled at API integrations, automated testing, and Agile delivery to accelerate feature releases while maintaining high-quality standards.

TECHNICAL SKILLS

- **Languages:** Swift, Objective-C, RxSwift, JavaScript, TypeScript, Node.js, HTML, CSS
- **Frameworks & SDKs:** SwiftUI, UIKit, Combine, CoreData, SwiftData, WidgetKit, ActivityKit
- **Concurrency & Reactive Programming:** Swift Concurrency (Async/Await, Task, Structured Concurrency), Combine
- **Architecture Patterns:** Clean Architecture, MVVM, VIPER, MVC, Coordinator, Modular Architecture, Scalable System Design, Dependency Injection, Delegate, Singleton
- **Networking:** REST APIs, GraphQL, Codable, JSON, Swift Concurrency, Alamofire, PromiseKit
- **Databases:** CoreData, Realm, SQLite, SwiftData, UserDefaults
- **Cloud Messaging & Notifications:** Firebase (Crashlytics, Realtime Database, remote Config, Analytics), AWS(CloudWatch), Microsoft Azure (Notification Hubs), Push Notifications (APNs, SNS)
- **Third-Party SDKs & Integrations:** Stripe, Jumio, Google Maps SDK, Google(Navigation, Driver SDK), Zendesk Messaging, Sinch
- **Security & Payments:** Mobile Security (DataTheorem, MobileProtect), Secure Data Storage, Runtime Threat Detection, Payment Integration, Identity Verification
- **Testing & Quality Assurance:** XCTest, Swift Testing, Unit Testing, UI Testing, TDD, TestFlight
- **Developer Tools & CI/CD:** Xcode, Git (Branching, Code Reviews), GitLab CI/CD, Jenkins, Fastlane, Firebase App Distribution, Figma
- **Monitoring & Analytics:** Mixpanel(incl. Session Replay), NewRelic, Firebase Analytics, Performance Monitoring
- **Performance & Optimization:** App Performance Optimization, Network Optimization, Caching Strategies, Crash Reduction, Design-to-code(Figma to SwiftUI)
- **Cross-Platform:** Kotlin Multiplatform (basic), React Native (basic)
- **Operating Systems:** macOS, Windows
- **Methodologies:** Agile, Scrum, TDD, SDLC
- **Platform & Developer Practices:** Accessibility(iOS), Localization, Swift Package Manager (SPM), AI-Assisted Development (GitHub Copilot, Windsurf)

PROFESSIONAL EXPERIENCE

7 Eleven (Contract)

June 2023 - Present

Senior iOS Developer

Irving, TX

Worked on high-traffic retail applications including 7-Eleven, 7Now, Speedway, and Skipcart Driver.

- Built and enhanced consumer-facing iOS features using Swift, SwiftUI, and Combine, including iOS Widgets and Live Activities (WidgetKit, ActivityKit) for real-time updates, following Clean Architecture and MVVM to ensure scalability and maintainability across large-scale retail applications.
- Developed a native customer support module using SwiftUI, designed with Clean Architecture and a shared modular approach to support multiple applications.
- Built self-service refund and in-app support system, integrating Zendesk Messaging SDK to enable real-time support and reduce resolution time by ~30%.
- Integrated REST APIs using Codable with robust error handling, improving network reliability and reducing UI data inconsistencies by ~25%.
- Integrated Mixpanel, New Relic, and Firebase Crashlytics for monitoring and analytics, improving app stability and increasing crash-free sessions by ~20%.
- Owned architectural decisions for key features, applying Clean Architecture principles to improve scalability, modularity, and long-term maintainability.
- Increased automated test coverage by ~60% overall and ~80% for new features by writing unit tests using XCTest and Swift Testing.
- Collaborated with product, design, backend, and QA teams in Agile/Scrum environments, translating Figma designs into pixel-perfect SwiftUI implementations and delivering features through CI/CD pipelines to TestFlight and the App Store submissions and phased production releases.
- Worked closely with DataTheorem security team to identify and resolve mobile data leakage vulnerabilities.
- Ensured full iOS accessibility compliance using VoiceOver, Dynamic Type, and accessibility identifiers to support UI automation and inclusive design.
- Took complete ownership of modules, managing end-to-end development, Git branching, versioning, and code reviews to ensure high-quality, maintainable and smoothly deployed AppStore releases.
- Contributed to migrating modularized pods and third-party frameworks to Swift Package Manager (SPM) and integrating the Speedway app into the 7-Eleven iOS application, improving build performance, dependency management, and overall app integration.

Skipcart Driver App

- Developed a driver-focused logistics application using Swift and SwiftUI, implementing Clean Architecture and MVVM to support scalable and maintainable delivery workflows.
- Implemented real-time route navigation and tracking using Google Maps SDK and Google Navigation SDK, along with Live Activities (ActivityKit) to provide real-time updates for scheduled and future deliveries, improving driver efficiency and user visibility.
- Integrated push notification services using Amazon SNS and Azure Notification Hubs to deliver real-time driver alerts and delivery updates.
- Integrated Stripe and Jumio SDKs to enable secure payments and identity verification, improving transaction reliability and user trust.
- Improved app stability to 99.5% crash-free users and 4.75 App Store rating by optimizing caching and reducing redundant API calls.

- Refactored ~60% of the legacy codebase using Swift and SwiftUI, migrating to Clean Architecture and MVVM, improving maintainability, scalability, and testability.
- Achieved ~40% legacy and ~80% new feature test coverage using XCTest and Swift Testing, incorporating accessibility identifiers to support UI automation and improve reliability.
- Built a modular system using Swift Package Manager, aligned with Clean Architecture principles, separating reusable components into independent packages.
- Implemented secure data storage using Keychain and integrated MobileProtect and DataTheorem SDKs for runtime threat detection and app security.
- Integrated and monitored analytics and performance tools including Mixpanel, New Relic, Firebase, AWS CloudWatch, and Azure to ensure system reliability and real-time issue detection.
- Documented features and designed high-level diagrams in Confluence, enabling clear team communication and easier feature maintenance.
- Experience with Agile methodologies, including sprint planning, daily stand-ups, translating Figma designs into SwiftUI features, and contributing to CI workflows and supporting TestFlight and AppStore release cycles.
- Owned end-to-end quality of features by proactively validating test cases, identifying edge cases, and minimizing defects before QA, resulting in highly stable releases.
- Collaborated closely with the team on feature development, performing Git branching, versioning, and code reviews to maintain code quality and consistency across the application.
- Leveraged AI coding tools (GitHub Copilot, Windsurf) to accelerate development, reduce bugs, and improve code quality by ~20%.

GP Infotech Pvt Ltd.

Jan 2019 - Dec 2021

Senior iOS Developer.

Hyderabad, India

Led the iOS development team delivering mobile solutions for international clients across education, conferencing, and fleet management platforms.

Mancosa Quality Conference

Nov 2020 – Dec 2021

Client - Mancosa Universities, South Africa

- Led development of a SwiftUI-based conference management app, delivering a scalable and intuitive experience for event organizers and attendees.
- Integrated Zoom SDK for in-app video conferencing and live sessions, enabling real-time communication at scale.
- Implemented Firebase Analytics and Crashlytics to monitor user behavior and application stability in production.
- Optimized app lifecycle and background state management to ensure stability during live conference events.
- Managed TestFlight releases and CI distribution and AppStore submission process, improving QA feedback cycles and accelerating release iterations.

Mancosa Student Communications.

Nov 2019 – Oct 2020

Client - Mancosa Universities, South Africa

- Developed student communication features including messaging, notifications, and document access using Swift and MVVM architecture.
- Built real-time chat functionality using MessageKit, increasing user engagement by ~20%, and implemented facial recognition authentication using CoreML, TensorFlow, and Vision frameworks.
- Designed adaptive UI layouts for iPhone and iPad using Auto Layout and Size Classes, improving reliability through unit testing and TestFlight validation.

gFleet+

Jun 2019 – Oct 2019

Client – Gussmann Technologies, Malaysia

- Developed real-time fleet tracking application using Swift and Google Maps SDK.
- Optimized map performance using clustering, polylines, and animations, improving rendering efficiency by ~30%.
- Built telemetry-based dashboards and integrated Firebase Analytics and Crashlytics for production monitoring and stability tracking.

GTelemetry

Jan 2019 – Jun 2019

Client – Gussmann Technologies, Malaysia

- Contributed to end-to-end iOS development, including feature delivery and production releases, ensuring stable and reliable app performance.
- Built telemetry dashboards and real-time tracking features using custom Swift chart components and Google Maps integration with clustering and overlays.
- Developed and optimized REST-based networking layer with retry logic and structured testing, improving reliability and application stability.

Tecordeon Software Pvt Ltd

May 2017 - Jan 2019

iOS Developer

Hyderabad, India

- Developed hardware-integrated iOS applications using Swift and UIKit with BLE-based communication for real-time device control systems ensuring production readiness and supporting release deployments.
- Built and optimized CoreBluetooth communication layer with connection management, recovery, and asynchronous command handling, achieving >98% success rate and reducing disconnect failures by ~40%.
- Designed reusable Swift framework and custom UI components (gauges, color pickers, control panels), improving development efficiency by ~30% and reducing Bluetooth-related defects by ~25%.

Brucode Technologies Pvt Ltd

Mar 2016 - May 2017

iOS Developer

Punjab, India

- Developed and maintained iOS applications using Swift and UIKit across the full application lifecycle, including feature development, AppStore submission support and production releases.
- Integrated third-party SDKs for authentication and analytics, including social login (Facebook, Google, Microsoft, Twitter).
- Built reusable UI components (UITableView, UICollectionView) and data visualization screens using chart libraries to improve UI consistency and analytics presentation.

EDUCATION

Oklahoma Christian University

Jan 2022 – May 2023

Master of Science, Computer Science - USA
